

TRANSPORTATION SERVICES AGREEMENT — ATLAS LOGISTICS

Document ID: DOC-014 | Version: 2026 | Effective: 2026-01-01 | Status: ACTIVE | Entity: Atlas Logistics

1. Parties and purpose

This controlled synthetic agreement defines transportation-service obligations between the enterprise and Atlas Logistics. It is designed to represent a carrier-specific commercial source for enterprise knowledge retrieval and comparison.

2. Service scope

National standard and express road transportation for approved routes, including scheduled delivery appointments where defined in the operating plan.

3. Service-level obligations

The carrier must perform the contracted services according to the applicable service category, route commitments, approved operating instructions, and the active Transportation Policy. Contract-specific obligations apply where they are stricter than general operating requirements.

4. Performance measurement

Performance is reviewed using the enterprise Logistics KPI Dictionary and carrier-governance process. OTIF, on-time delivery, damage rate, claim rate, and cost-related indicators may be used according to the contracted scope.

5. Delay penalty

Atlas is subject to a service-credit penalty when a carrier-attributable delivery misses the contractual delivery commitment. The service credit is 3% of the freight charge for the affected shipment. If monthly OTIF falls below the applicable corporate target for two consecutive months for carrier-attributable reasons, an additional 2% monthly service credit applies to eligible freight charges for the affected scope. Penalties require validated performance evidence.

6. Force majeure

No delay penalty applies to the extent the failure is directly caused by a documented force-majeure event outside the carrier's reasonable control, provided Atlas notifies the enterprise promptly, provides supporting evidence, and takes reasonable mitigation action. Capacity shortages, routine vehicle maintenance, and subcontractor scheduling failures are not automatically treated as force majeure.

7. Corrective action and escalation

Repeated service failures may trigger corrective action and formal escalation under the Carrier Management Policy. Contractual penalties do not prevent the enterprise from requiring a recovery plan or evaluating replacement where governance conditions are met.

8. Data handling

The carrier may process only the enterprise and customer information required to execute the contracted service. Data sharing must comply with the active Data Sharing Policy and Information Security Policy.

9. Special commercial terms

Atlas must maintain a documented contingency contact and provide a recovery ETA for critical-delivery escalations within 30 minutes of formal notification.

10. Governing enterprise documents

Transportation Policy; Carrier Management Policy; Logistics KPI Dictionary; Data Sharing Policy; Information Security Policy; applicable Approval Authority Matrix.

11. Document control

Controlled synthetic document generated for the Enterprise Knowledge AI System evaluation corpus. Contract interpretation in this corpus must consider the specific carrier, clause scope, effective date, and applicable enterprise governance.
