

TRANSPORTATION INCIDENT REPORT — R003

Document ID: DOC-018 | Incident date: 2026-05-21 | Status: CLOSED | Route: R003 | Carrier: Nova Transportes

1. Executive summary

Route R003 experienced a severe transportation disruption after a carrier planning failure caused the scheduled vehicle to miss collection. The shipment was classified as critical and recovered through an expedited alternative vehicle.

2. Business impact

Expedited transportation cost was incurred. The receiving operation avoided a full stop, but the event was classified as a severe service failure because recovery depended on emergency intervention.

3. Event timeline

Time / stage	Event
Planned collection	Vehicle was expected at the origin within the scheduled collection window.
Missed collection	No vehicle arrived; Nova confirmed an internal dispatch-planning error.
Critical escalation	Supply Chain classified the delivery as critical and requested immediate recovery.
Contingency	An expedited vehicle was approved and dispatched.
Delivery	Shipment reached destination after the original commitment but before the receiving operation stopped.
Review	The event was escalated to the 2026 Operations Committee because of recurrence risk and control weaknesses.

4. Root-cause findings

Primary cause: internal carrier dispatch-planning failure.

Contributing cause: no automated confirmation that a vehicle had been assigned before the collection cutoff.

Control gap: escalation depended on manual discovery after the collection window had already been missed.

5. Corrective and follow-up actions

Require Nova to implement pre-collection assignment confirmation.

Create an internal exception alert for critical shipments lacking carrier assignment confirmation.

Review emergency-transport approval flow and contingency contact coverage.

Submit unresolved actions to the Corrective Action Tracker and Operations Committee.

6. Related governance

Transportation Policy; Critical Delivery SOP; Carrier Management Policy; applicable carrier contract; Corrective Action Tracker.
